Abstract (Basic): DE 29922725 U

The operating element has an end piece (11) for coupling to the flat electronic circuit module and a relatively rotatable operating lever (12) provided with a handgrip (122) and a locking slider (123), for selectively blocking the operation of the operating lever.

The locking slider may be operated by a flat operating slider (1230) provided on the upper side of the handgrip.

USE - Operating module is used for lever movement of flat

electronic circuit module, for insertion or removal relative to module carrier.

ADVANTAGE - Operating element can be locked to prevent accidental release of flat electronic circuit module.
